

# **Atlas of Muskellunge Streams and Rivers in Ontario**

**May 2001**

**Information compiled by:**

**S. J. Kerr  
Fisheries Section  
Fish and Wildlife Branch  
Ontario Ministry of Natural Resources**

## **Preface**

Muskellunge (*Esox masquinongy*) is one of the most highly prized fish species in the Province of Ontario. A compilation of information in 1987 (MNR 1987) indicated that there were 302 Ontario lakes which contained muskellunge populations. Muskellunge also inhabit many streams and rivers of Ontario, however there had never been any previous attempt to identify those waters.

This exercise represented an initial effort to document Ontario streams and rivers which support muskellunge populations. Information was obtained from a variety of sources including a review of Ontario muskellunge literature and file records, a survey of Ministry of Natural Resources (MNR) field staff, consolidation of information from the Cleithrum Project and the Ontario Fisheries Information System (OFIS) database and personal communications with several muskellunge anglers, managers and scientists.

This listing identifies 105 streams or rivers in Ontario which contain muskellunge. Waters range in size from the Ottawa and St. Lawrence rivers to several small spawning and nursery streams. There are undoubtedly additional waters which have been missed during this compilation. The challenge for Ontario fisheries managers will be to confirm the status of the stocks listed herein and to add new waters to this listing as information becomes available.

River/Stream	Township(s)	County/District	Latitude	Longitude	Watershed	Comments/Notes	Source(s)
Baxter Creek	South Monaghan	Peterborough	44° 11'	78° 20'	2HJ-01	<ul style="list-style-type: none"> <li>Otonabee River tributary.</li> <li>Muskellunge present in marshy areas downstream of Highway 28.</li> </ul>	D. Bell (pers. comm.)
